

Acute Stroke: Diagnostic and Organizational Aspects (Lecture)

A. V. Levshakova, M. A. Domashenko

Research Center of Neurology RAMS, Moscow

Abstract

Stroke is a serious medical and social problem. Organization of stroke services, including specialized stroke units, is known to be a crucial factor to improve outcomes. Availability of neurovisualization team in 24/7 schedule is essential part of acute stroke care. We discuss various algorithms of visualization to be performed in patients with suspected acute stroke.

Key words: Neurovisualization, Computed Tomography, Magnetic Resonance Imaging, Ischemic Stroke, Haemorrhagic Stroke.
