---

### Abstract

An article prepared lecture format is described CT topography of regional lymph nodes that may be affected by metastases of gastric cancer and colon cancer. The authors described detail computed tomographic image of lymph paths in this patient group. The present data will allow CT specialists to improve the accuracy of CT diagnostics, will make easier the analysis of the obtained CT results and the generalization in a detailed protocol. These diagnostic data will give an opportunity clinicians (the oncologist, the radiologist) to correct the manage treatment.

**Key words:** Computed Tomography, CT topography, Gastric Cancer, Colon Cancer, Regional Lymph Nodes.
