

Multiple View Cranial Ultrasonography for Detection of Cerebral Sinovenous Thrombosis in a Newborn (Case Report)

N. M. Dubasova

Irkutsk Clinical Children Hospital

Abstract

We report on a rare clinical case of cerebral sinovenous thrombosis in a newborn with inherited thrombophilia. Thrombosis of transverse sinus was diagnosed on multiple view cranial ultrasonography and confirmed on CT and MRI.

Key words: Newborns, Ultrasonography, Cerebral Sinovenous Thrombosis.
