Abstract

Significant progress in the development of methods of radiation diagnosis has led to a sharp increase in the frequency of detection of tumors in different organs. Adrenal cancer is one of the important and complicated diagnostic and treatment plan sections of Oncology. Differential diagnosis of benign and malignant adrenal tumors is extremely difficult. Especially, if at the time of detection of the neoplasm are no «classic» symptoms of adrenocortical cancer: the size of education more than 4 cm in diameter, irregular contours and heterogeneous structure of the hearth, high density on CT study, secondary changes in the liver and retroperitoneal lymph nodes. Attention is a rare clinical case of cancer of the adrenal gland in clinical practice.

Key words: Carcinoma, Adrenal Gland, Ultrasonography, X-ray, Computer Tomography.
