Abstract

Authors describe main features of chest surgical pathology in AIDS-patients with opportunistic infection. Also article depicts surgical management of destructive processes of lungs and mediastinum such as chronic empyema and pleuritis. The features of the picture with multislice computed tomography (MSCT) of the examined pathology and the methods of its treatment are presented.

Key words: Multislice Computed Tomography, Human Immunodeficiency Virus, Acquired Immune Deficiency Syndrome, Multiple Opportunistic Co-infections, Abscess, Pleural Empyema.
