

Unified Radiological Information Service as a Key Element of Organizational and Methodical Work of Research and Practical Center of Medical Radiology

N. S. Polishchuk, N. N. Vetsheva, S. P. Kosarin, S. P. Morozov, E. S. Kuz'mina

Research and Practical Center of Medical Radiology, Department of Healthcare of Moscow

Abstract

The paper describes administrative, methodical and educational activities for Moscow radiology service improvement. The Unified radiological information service is a main tool for work-flow monitoring, quality control (including peer-review on the scale of the megalopolis) and analytics. Analysis of CT and MRI examinations in out-patient medical organizations had been performed as an example of the Service using from management point.

Key words: Computer Tomography, Magnetic Resonance Imaging, Unified Radiological Information Service, Radiology Service, Moscow Healthcare, Management of Medical Care.
