Abstract

Every year there is the appearance of new terms, which complicates the work of doctors. Abroad, there are multiple dictionaries and glossaries, which are precise definitions of many words. In our literature there are multiple versions of the descriptions of the same state. And this problem exists not only with new terms. This review focuses on such terms as the «nodule» and «mass» and phrases associated with them.

Key words: Nodule, Mass, Computed Tomography.
