### Abstract

A clinical case of breast sarcoma is presented. Radiation and morphological diagnostics are of particular interest. According to mammography and ultrasound, no direct signs of malignancy were identified (BI-RADS, category 4). The results of the cor-biopsy corresponded to the leaf-like tumor. After sectoral resection, sarcoma of the mammary gland was verified.

**Key words:** Sarcoma of the Breast, Leaf-Shaped Fibroadenoma, Phylloid Tumor, Clinical Examination of the Mammary Glands, X-Ray Mammography, Cor-Biopsy.
