

Age Features of Ultrasound Imaging of the Cartilaginous Part of the Ribs in Surgery

A. S. Moshkin

Orel State University named after I. S. Turgenev, Ministry of Science and Higher Education of Russia

Abstract

The features of visualization of ribs cartilages in the differential diagnosis of lesions with changes in age genesis are described. As a result of the observation, the high information content of ultrasound scanning in differential diagnostics was noted, the features of visualization of rib cartilage structures in people of different ages were determined.

Key words: Costal Cartilage, Chest Trauma, Ultrasound Diagnostics.
